Hello,

I'm a homeschooled highschooler who strongly advocates the eucalyptus trees being removed.

The trees bring nothing good for this community besides shade and come with a load of detrimental aspects for both the native wildlife and people living here. Their oils poison the soil and kill native plants and animals. They highly increase fire risk, outcompete and kill native tree species, and their poisonous foliage can cause severe liver and kidney damage which can kill pets. Their shed foliage and bark chokes out and covers native low-growing plants. This is just to name a few of the harmful effects of these trees.

The eucalyptus trees must go. Every good side to these trees that has been stated is either false or natives do as well. These trees do not keep our community cold, the ocean does.

Sincerely, Oonagh Degenhardt.

I'm in favor of removing eucs along the fireroads and basically anywhere and everywhere in Quarry Park. I find the monoculture of eucs very depressing scenery. Hopefully if there is space and sunlight other native species can get a chance to get established. The nearby hills have low shrubs and beautiful views while Quarry Park just looks like a monotonous mess.

Thank you for removing the trees to make firebreaks.

In regards to this Nextdoor posting, THANK YOU SO MUCH for taking care of these trees!
It is much appreciated and our house fully supports this!!!

Thank you

Quarry Park will have 200 feet of trees removed along each fire road (100 feet of trees removed on each side of each road). As roads cover most of the park there will be very few trees left and hiking the roads will be in direct sunlight most of the time (very hot). Let the Planning Commission today before their Wednesday meeting 4/26/23 at 9:00 a.m.
